Musculoskeletal Research Database for Clinicians

Register to find expertise or support aligned to your research interests.

- Are you an RACP Trainee (Advanced or Basic) or other Clinician required, or wishing to, complete a research project for your training?
- Are you a more senior clinician with research ideas in musculoskeletal health who would like some help?
- Do you need help navigating the research process or have research interests beyond what your clinical site can support?

The Sydney Health Partners Musculoskeletal Clinical Academic Group are pleased to announce our database of existing research projects and project ideas. The database is designed to help match RACP Advanced Trainees (ATs), Basic Physician Trainees (BPTs) or other interested Clinicians with Early-to Mid-Career Researchers (EMCRs) to provide mentoring or project support.

Our EMCRs are from a variety of sites and backgrounds (not necessarily medical doctors) and often are allied health professionals by training. Most hold PhDs with postdoctoral experience, where an EMCR is still completing their PhD, their own research supervisor will also be involved in the process.

We hope to demystify the research process for clinicians while fostering career-long relationships that could enhance a clinician's practice and knowledge.

How does it work?

To get started, email us at shp-musculoskeletal-cag.admin@sydney.edu.au to receive a PDF of potential project ideas, or submit your own research idea and we'll see if one of our EMCRs can support it.

Trainees and clinicians would still be supervised by their clinical/research supervisors from their own sites, as appropriate, with the EMCRs acting as an additional research supervisor/mentor. Trainees and clinicians require affiliation with one or more of SHPs' partner organisations.

In your email, please include:

- Your preferred area of interest
- Your current training specialty and site
- Your supervisor's name, email, and confirmation that they support your participation in the matching process (if relevant)
- Your Head of Department

...and we will do our best to match you with a keen EMCR! We look forward to successful collaborations!
